

# Empower Cloud

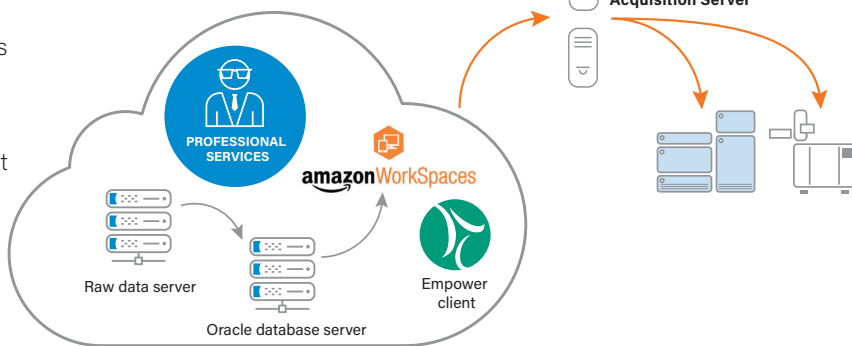

Empower™ Cloud combines the world's market leading chromatography data software (CDS), Empower, with Amazon Web Services (AWS), the world's most secure cloud services platform, offering compute power, database storage, content delivery, and other functionality to help businesses scale and grow. Empower Cloud provides global companies the speed and agility their business requires, allowing them to focus on science and not the infrastructure.

## WHAT IS EMPOWER CLOUD?

Empower Cloud for Infrastructure as a Service (IaaS) leverages the internet to procure technology, drive operational efficiency, and provides a low-cost solution for scaling IT capacity by replacing up-front capital costs with low variable costs to replace on premise installations.

## ADVANTAGES

Empower Cloud gives you the opportunity to capture and grow new revenue, drive operational efficiency, differentiate from competitors, and expand your business into the future.

**Simplified deployment and upgrades**

**Reduce infrastructure complexity**

**Achieve scale and speed without capital investment**

## COMPLIANCE

With Empower Cloud, you can improve consistency, quality, compliance, and collaboration throughout your entire organization.

**Speed up decisions and reduce mistakes**

Easier information management flow between people, suppliers, and distributors

**Reduce the risk of regulatory friction and improve GxP compliance**

Lessen manual processing, non-standard systems, and 'work-arounds'

**Improve demand planning and inventory management**

Enhance visibility up and down the value chain, helping to avoid counterfeit products and serializing data

## IMPLEMENTATION SERVICES & SUPPORT

Waters' highly trained Professional Services consultants provide the skills and expertise to make software implementation a success.

### Minimize variation and risk

- Waters designs, evaluates, and provides templates under Waters Quality Management Systems (QMS)
- Waters Professional Services assist your organization to design, deploy, and validate appropriate Amazon infrastructure
- Automated deployment tools to replicate Waters templates onto your cloud
